
Colectica 7.1

Jeremy Iverson*¹

¹Colectica – United States

Abstract

Colectica is happy to announce at EDDI the release of Colectica version 7.1. Colectica is software for creating, publishing, centralizing and managing DDI metadata within and across organizations.

It is used by national statistical organizations, university research groups, and data collection agencies to

provide well-documented data to researchers and the public.

Colectica is built on open standards like DDI and GSIM, ensuring that information can be presented in

numerous formats and shared among different organizations and tools. In this session we will give an

overview of new features of Colectica 7.1, including:

- New enterprise authentication methods and features, including role mapping and OpenID-Connect PKCE
- Improved ElasticSearch indexer
- Difference viewer within Colectica Workflow
- Language and translation improvements on Colectica Portal
- Metadata input sheets
- A new CLI tool for Colectica Repository
- Nesstar and DDI 2 import improvements
- Parquet file support
